Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 5-8 and 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Widener et al. ("Widener")(US 4,640,407).

Widener (Fig. 1-4, best seen in fig. 3) teaches a device comprising a trough (36) having a longitudinally extending groove (defined by side walls 34 and extending to bridge near 64) along which the objects can slide, the groove having a floor formed with a throughgoing elongated longitudinal slot (42) and a formation (indent near 62 in fig. 1). Widener further teaches a vibrating means (col. 8, ln. 40-50). Further, Applicant is respectfully reminded that claim language consisting of functional language and/or intended use phrasing is given little, if any, patentable weight as the apparatus must merely be capable of functioning, or being used, as claimed. See MPEP 2112.02, 2114. Here, the device is certainly capable of, inter alia, sorting, sliding or rotating objects about vertical axis that are a width smaller than a "predetermined" minimum object width (e.g., consider how spherical objects smaller than the slot width would slide down the groove and be removed or how some spherical objects could rotate when impacting the formation at the end of the slot).

Claims 1-4 and 6-7 and 9-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Ettlinger, Jr. et al. ("Ettlinger")(US 3,738,465).

Ettlinger (Fig. 10-12) teaches a device comprising an inclined trough (92) having a longitudinally extending groove (between side walls 34) along which the objects can slide, the groove having a V-shaped floor formed with a throughgoing elongated longitudinal slot (Fig. 12, slots 100). Ettlinger further teaches a vibrating means (98). Further, Applicant is respectfully reminded that claim language consisting of functional language and/or intended use phrasing is given little, if any, patentable weight as the apparatus must merely be capable of functioning, or being used, as claimed. See MPEP 2112.02, 2114. Here, the device is certainly capable of, inter alia, sorting, sliding or rotating objects about vertical axis that are a width smaller than a "predetermined" minimum object width (col. 4, ln. 30 et seq.).
